

At ProcureStaff Technologies, we fully believe that the success of a vendor management system for enterprise services spend is fully dependent on how well that system fits within the environment of the client. We hold configurability and the ability to integrate seamlessly within an environment as two of our most important tenets. We have proven experience with client driven global expansion and with new global implementations. We configure each program to meet individual business needs. We support all of our clients with a PMI based discipline for implementation and continue to support our clients globally throughout our programs with the highest level of help desk support.

CONFIGURATION

One of the things that makes Consol stand apart from the crowd the most is the depth of configurability. Many providers say their tool is “configurable”; but with Consol, we mean it, and we can prove it. Over 1,525 different components are configurable within Consol.

We focus on designing the system so that every division and every country that requires different nomenclature, language and workflows has what makes them feel comfortable with the system – we know this increases user adoption and ultimately fosters program success.

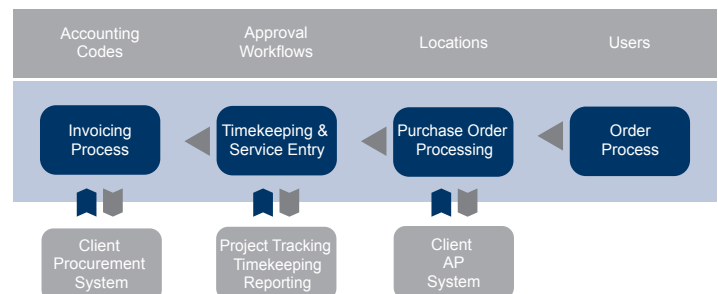

INTERFACE TOOL KIT

We have a formalized standard interface document that helps us collect standard feeds from clients to ensure that their interface between Consol and existing systems is easily accomplished. SSO (single sign-on) enables one login for multiple systems including Consol creating an easy user experience. Standard points of interface include:

- User Data
- Accounting Codes
- Locations
- Supplier Profiles
- PO Data
- Access Provisioning
- Security Data
- Time & Expense
- Data Invoicing & Payments

CUSTOM INTEGRATION

Sometimes, custom integration is needed to make systems communicate effectively.

- Consol can easily integrate with most applications through industry standard based interfaces. Because ProcureStaff Technologies has internal, full scale software development capabilities, we continue to deliver even the most customized solutions for our clients. We maintain the philosophy that one size does not fit all. Consol has a dedicated team of integration specialists, each with the unique system integration skills and experience needed to seamlessly Integrate complex systems.
- Fully integrated bill-paying services: one bill/one check
- Extensive ERP integration experience
 - Oracle
 - PeopleSoft
 - SAP
 - Ariba
 - JD Edwards

IMPLEMENTATION

Consol is delivered in a Software as a Service environment (SaaS), thus there is no requirement for software or hardware in the client's site(s) to run the program. Companies all run their businesses differently, and they have unique requirements for their VMS. That means your company, and even different business units within your company, will have unique needs that must be addressed prior to and during the implementation process. Whether you have an MSP or your own internal program coordination resources, we will make the tool work efficiently for everyone involved in the value chain.

- Implementation leaders certified by the Project Management Institute
- Effective change management and control processes
- A dedicated implementation team and customer training program
- On-time implementation

GLOBAL EXPANSION

Few VMS tools have Consol's deep experience when it comes to successful global expansion – we had the first VMS technology to be implemented on a global basis in 2000. Growing globally with clients requires great flexibility and local knowledge. Not all countries have the same volume, thus they may demand different service models to serve them. ProcureStaff Technologies has experience with creating truly unique low volume country solutions.

A VMS tool needs to allow for flexible configuration and incorporation of local processes – and needs to accommodate local tax and labor law. Consol's architecture allows for virtually unlimited scalability. Whether you have 500 users or 500,000 users, in one country or in many countries, the system is designed to support your global requirements.

- multiple load-balanced server farms
- over 300,000 current users within one single instance
- unlimited countries and currencies
- Unique business rules per country
